

I claim:

1. A system for dynamically translating between a first communication protocol and a second communication protocol, said system comprising:

5 (a) means for receiving a first communication signal utilizing said first communication protocol;

(b) means for determining said first communication protocol;

(c) means for initiating a first communication protocol translator to extract data from said first communication signal in accordance with said first communication protocol and for storing said data in a buffer; and

10 (d) means for retrieving said data from said buffer and translating into a second communication stream utilizing said second protocol.
